# Memorandum

TO : DIA COMOR Member

DATE: JUN 6 1967

FROM : DIAMC

SUBJECT: Nodal Traces on PG-3

1. The MCGWG meeting of 1 May 1967 discussed the above subject, giving emphasis to the need to have the PG-3 nodal traces operating over specific regions of the US for test purposes.
2. Test results of PG-1 were unsuccessful and only limited value is expected from PG-2. However, in case PG-3 should operate significantly better than previous PG test data, it would be important to have the nodal traces appearing on the photography to the extent of coverage obtained. This conclusion was reached by discussion with representatives of the DoD MC&G utilization community.
3. It is requested that action be taken in the COMOR to arrange for the nodal traces of PG-3 to be operating during the entire mission.
